What is claimed is:

 ${\it 1.} \quad \hbox{A method for promoting the healing of damaged} \\$  tissue in a patient in need of such treatment,

## 5 comprising:

exposing the damaged tissue, which is surrounded by an air impermeable wound cover, to an effective amount of gaseous nitric oxide for a period of time that exceeds eight consecutive hours; and

allowing at least a portion of the gaseous nitric oxide to contact the air adjacent to the air impermeable wound cover through the air impermeable wound cover.

- The method of claim 1 wherein the damaged tissue is selected from the group consisting of muscle,
- 15 ligament, tendon, skin, and bone.
  - The method of claim 1 wherein the damaged tissue is damaged by surgical incisions, trauma, and pathological processes.
- 4. The method of claim 1 further comprising
  20 healing the damaged tissue by recruiting inflammatory
  cells, followed by fibroblasts to the damaged tissue.
  - 5. The method of claim 1 wherein the air impermeable wound cover is transparent and allows for permeation of small molecules, while simultaneously preventing microbial invasion.
  - 6. The method of claim 1 wherein effective amount of gaseous nitric oxide ranges from 20 1000 ppm.
- 7. The method of claim 1 further comprising pretreatment step of cleaning and scrubbing the damaged 30 tissue.
  - 8. The method of claim 1 further comprising pretreatment step of exposing to a wound healing agent other than gaseous nitric oxide.

- 9. The method of claim 1 further comprising pretreatment step of exposing the damaged tissue to an agent in combination with gaseous nitric oxide in order to enhance its effectiveness and/or absorption.
- 10. The method of claim 1 further comprising posttreatment step of wetting, dampening or moistening the damaged tissue following gaseous nitric oxide therapy.
- 11. The method of claim 1 further comprising 10 posttreatment step of applying a wound healing agent in combination to gaseous nitric oxide therapy.
- 12. The method of claim 1 further comprising posttreatment step of exposing the damaged tissue to an agent in combination with gaseous nitric oxide in order 15 to enhance its effectiveness and/or absorption.
- 13. The method of claim 1 further comprising the administration of exogenous nitric oxide gas to tissue flap and surrounding damaged area in order to promote flap viability and increase local blood flow to donated tissue.
  - 14. A method for promoting the healing of damaged tissue in a patient in need of such treatment, comprising:

spraying, from a spray container, the damaged tissue

25 with an effective amount of gaseous nitric oxide; and
 allowing the gaseous nitric oxide to contact the air
 adjacent the damaged tissue.

- 15. A method for promoting the healing of damaged tissue in a patient in need of such treatment,
- 30 comprising:

exposing the damaged tissue, which is surrounded by an air impermeable wound cover, to an effective amount of gaseous nitric oxide for a period of time that exceeds eight consecutive hours. 16. A method for promoting the healing of damaged tissue in a patient in need of such treatment, comprising:

exposing the damaged tissue, which is surrounded by an air impermeable wound cover, to an effective amount of gaseous nitric oxide and other gases which contain ox ygen for a period of time.
